Nimbus Systems — Company Overview (2024)

Internal fact sheet · Synthetic test data

1. About Nimbus Systems

Nimbus Systems is a workflow automation company that provides cloud-based software to enterprise teams. Nimbus Systems was founded in 2018 by Dr. Maya Chen, a researcher who previously worked at the MIT Media Lab. The company is currently headquartered in Singapore, having relocated from Bengaluru in early 2023.

2. Flagship Product

The company's flagship product is NimbusFlow, a workflow automation platform used by more than 1,200 enterprise customers. NimbusFlow is hosted on Snowpeak Cloud, a major cloud infrastructure provider that Nimbus Systems has partnered with since 2021.

3. Funding

Nimbus Systems raised a Series C round of $120 million in November 2023, led by Meridian Ventures with participation from existing investors. At the time of the round, the company reported annual recurring revenue of $85 million.

4. Team and Leadership

Nimbus Systems employs approximately 340 people across its Singapore headquarters and regional offices. Raj Patel serves as the Chief Technology Officer and previously spent six years at Google as an engineering director.
